
Winds Study to Support RTCA SC 206 Subgroup 7 Development of Wind Guidance Document for ATM

**Principal Investigators – Michael McPartland & Tom Reynolds
Presented at 2016 Summer FPAW**

Eldridge Frazier, FAA

NextGen Programs of Interest

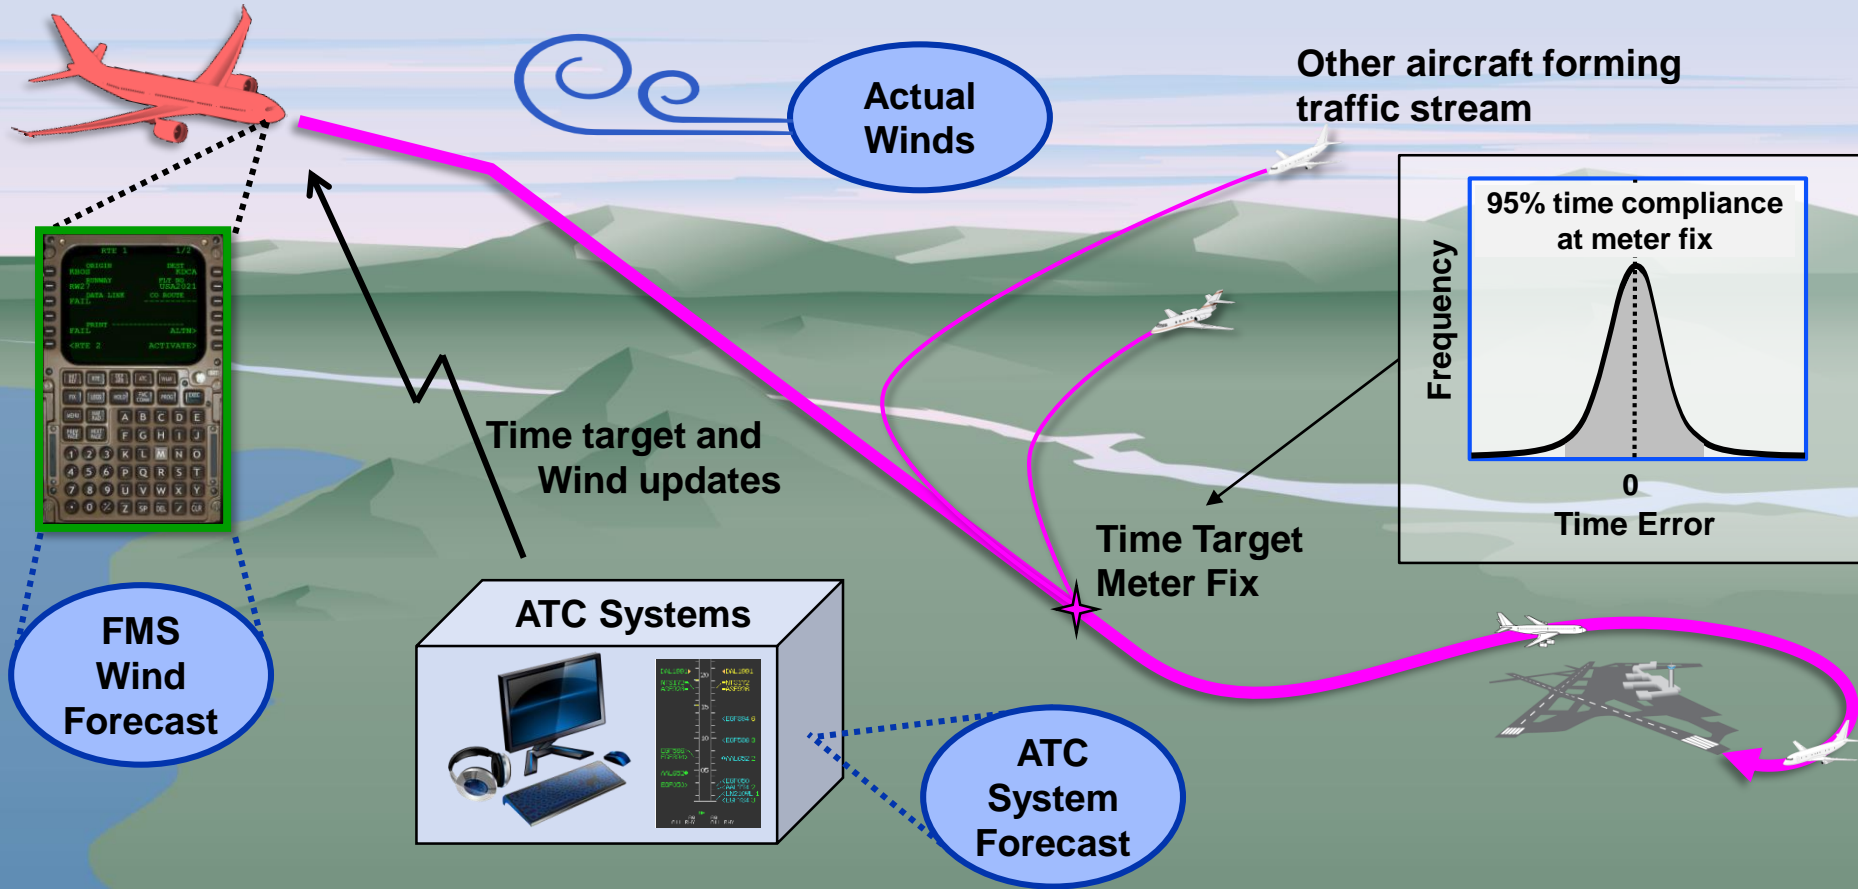

- **Wind and temperature forecasts can have a significant affect on aircraft trajectory estimation**
 - Ground systems
 - Airborne systems ← (WTIC)

- **RTCA SC-206 “Aeronautical Information and Meteorological Data Link Services”**
 - Required Time of Arrival (RTA)
 - Wake Vortex Mitigation
 - Interval Management (IM)

Required Time of Arrival Overview

Need for research to inform Minimum Weather Service & 4D-TBO guidance documents

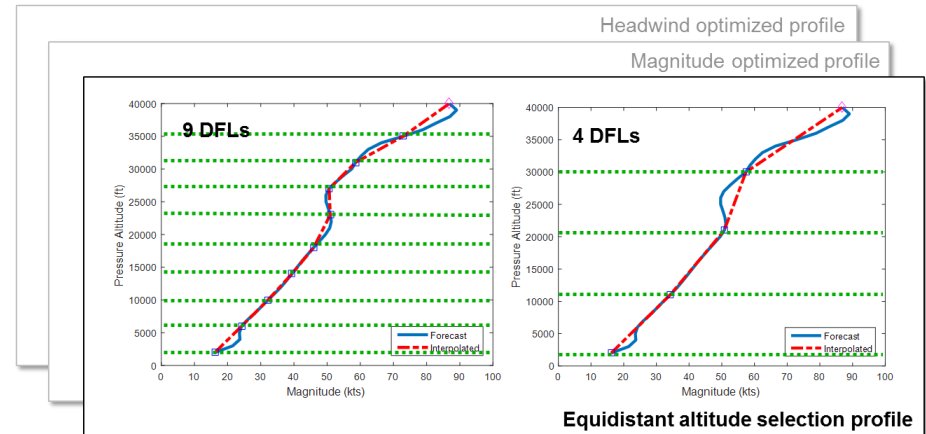

RTCA RTA Performance Research Questions

Determine affect of:

- Forecast source
 - GFS
 - HRRR
 - Perfect forecast (truth)
- Forecast age:
 - Published at least 2 hours prior to in-air update
- Number of FMS descent forecasts levels (DFLs)
 - 4
 - 9

- How descent forecasts are selected
 - Optimized to match wind magnitude
 - Optimized to match trajectory headwind
 - Equidistant spacing (from cruise to surface)

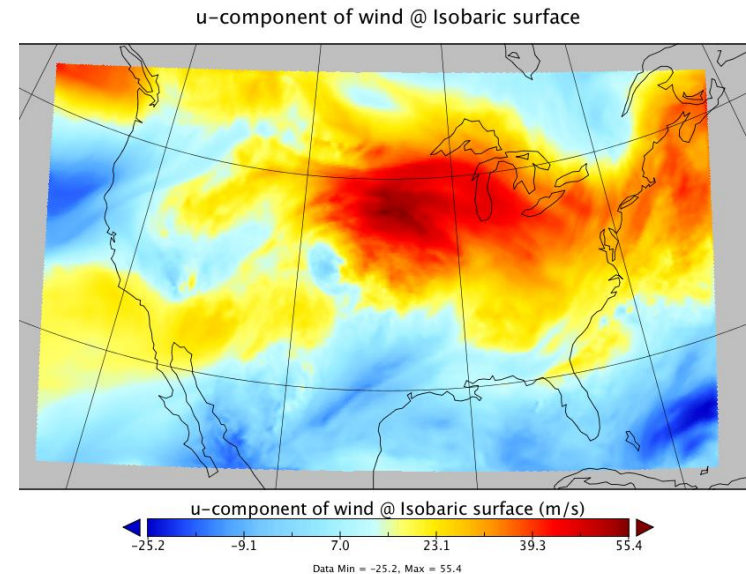

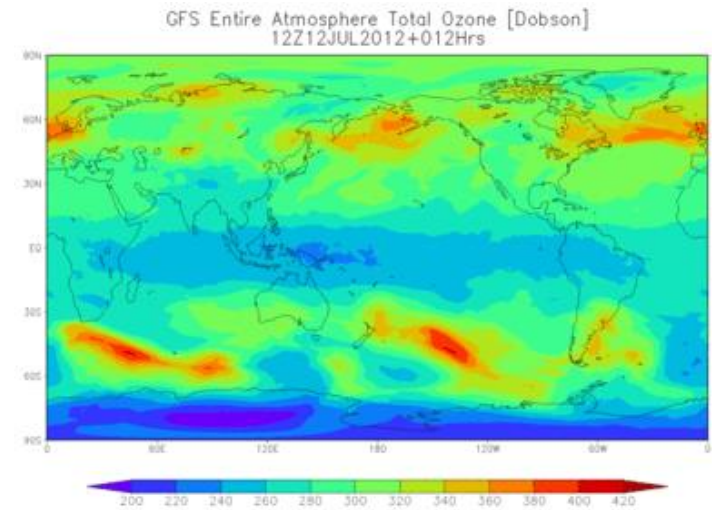

Introduction to GFS & HRRR

- **GFS (Global Forecast System)**
 - 28 km grid (0.5° averaged)
 - 26 pressure levels
 - Published 4 times per day: 00Z, 06Z, 12Z, 18Z
 - Forecast: +03, +06, +12,...+192hrs
 - Global coverage

- **HRRR (High-Resolution Rapid Refresh)**
 - 3 km grid
 - 50 pressure levels
 - Published every hour
 - Forecasts: +01, +02, +03,...+18hrs
 - CONUS

Analysis Methodology

MDCRS Points - Airport: KORD
02/01/2016
of Points - 46980

MDCRS Tracks - ORD Airport
11/12/2015 00:08:00 GMT to 11/13/2015 02:32:00 GMT

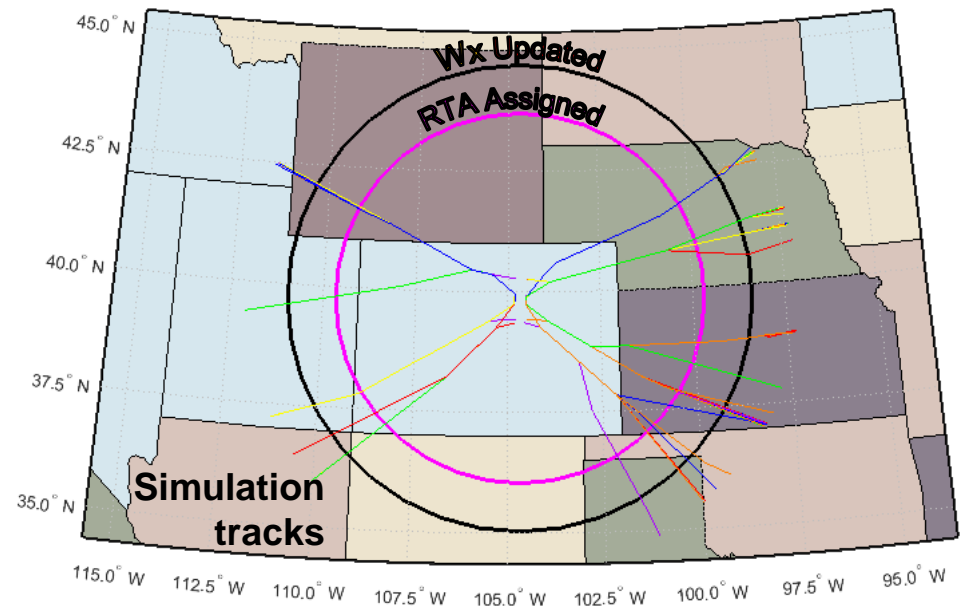

MDCRS Tracks Vertical Profiles
of Tracks - 50

- Identify MDCRS flights that stayed on route
- Use aircraft-measured winds as simulated winds
- Reproduce flights with simulated B757 and advanced FMS

CONOPS

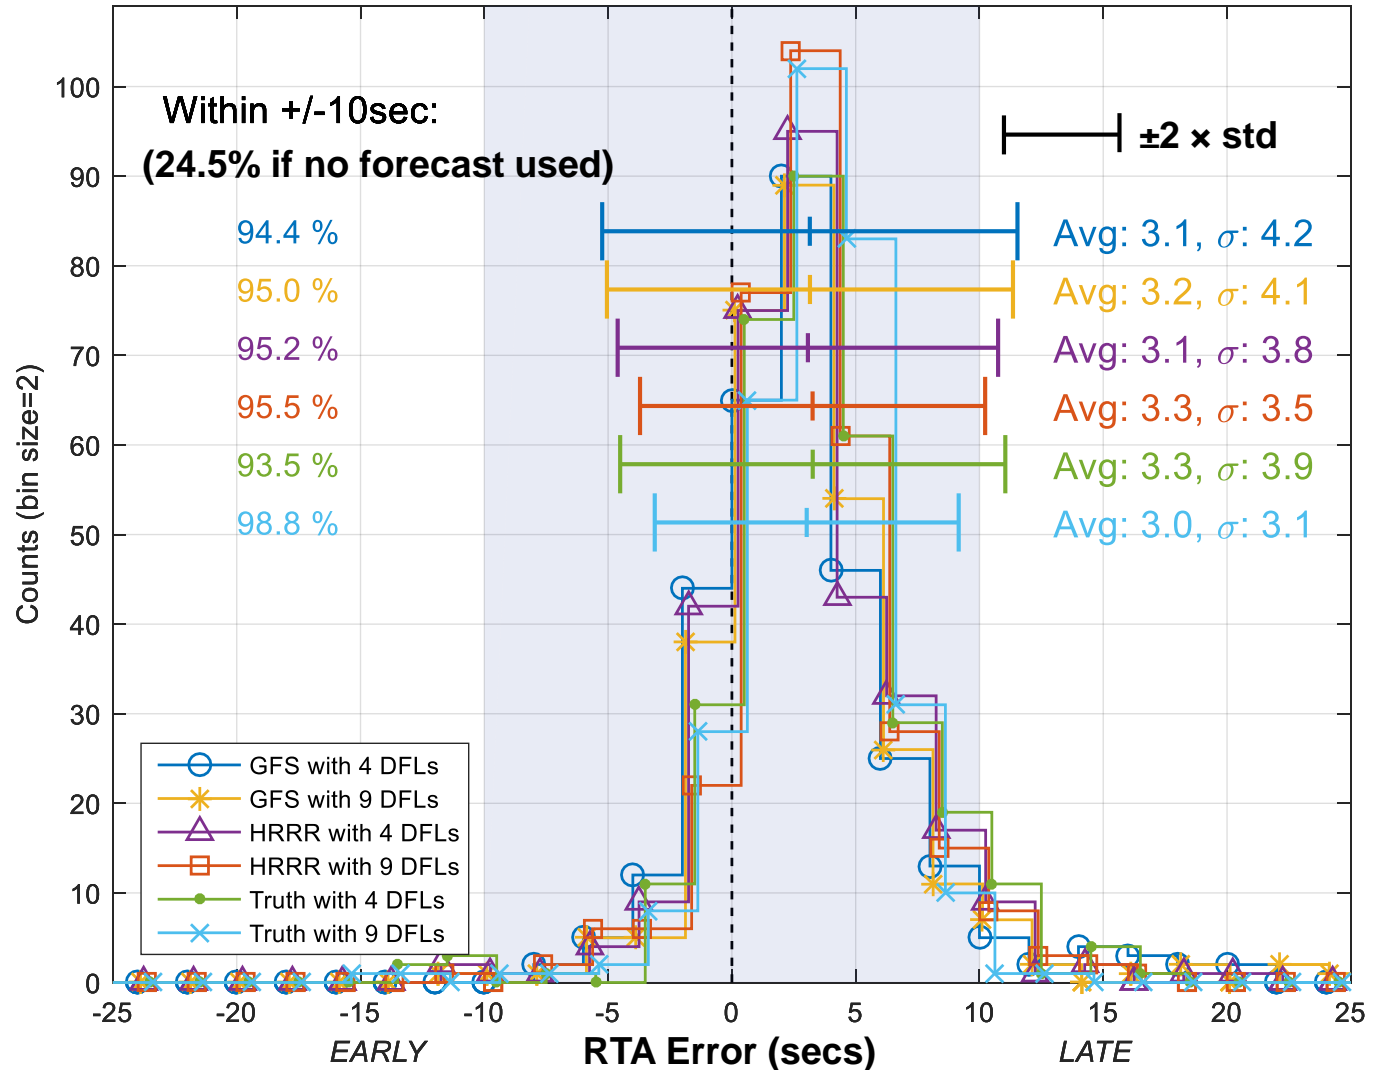

- Provided 2-hr old Wx updates 10 minutes prior to RTA freeze horizon
- Assign RTA time and fix 230 NM from destination
- Descents to ~ 10-15kft

Aggregated RTA Performance

- **Airports evaluated**
 - KATL, KBOS, KDEN, KEWR, KMDW, KORD, KPHX
- **340 flights**
 - Feb 1 – Mar 31, 2016
- **GFS & HRRR based on 2 hr forecast**
- **Truth based on MDCRS**

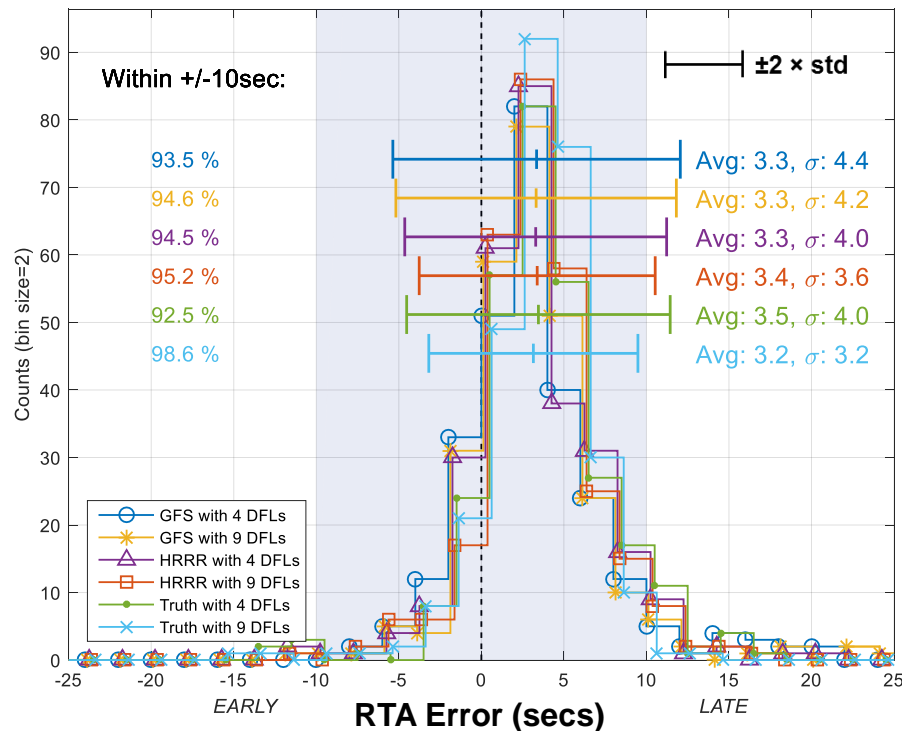

Effect of Speed Constraints

- **Speed constraints on STARs**

- Reduce speed control authority
 - Thus reduced RTA performance
- FMS honors speed constraints even with RTA operations (SC-214)

With speed constraints

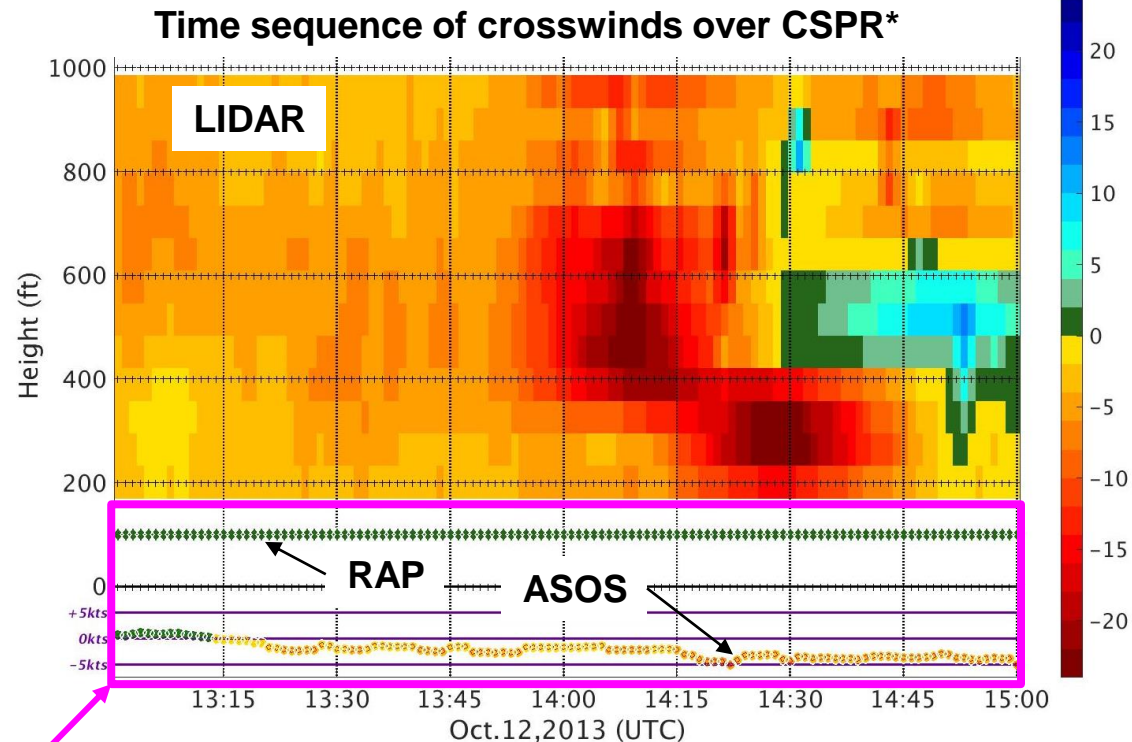

Without speed constraints

Wake Vortex Mitigation

- FAA looking to wind dependent strategies to increase throughput
- Use wind forecast system to predict “wake safe” regions
- Wake Terminal Mitigation System has access to
 - high fidelity wind observations near the ground (ASOS)
 - Numerical Weather Forecast Model predictions (for above ground)
- WTM System correctly handles forecast model error periods (see right) but at a cost of availability of increased throughput
 - Example wind shift removes availability ~45 minutes
 - System unavailable for hours
- Aloft observations, such as real-time aircraft winds would address this problem

WTM System (Middle of event shown above to illustrate maximum wind shift)

*Closely Spaced Parallel Runway (CSPR)

Interval Management Concept

NASA/TM-2016-219203
Ahmed, Barmore & Swieringa

- ATC provides IM clearance to the aircraft near top of descent (left).
- Pilots follow onboard speed guidance to achieve precise spacing interval at the achieve-by point , Δ behind the target aircraft (right).
- Δ may be a time or a distance

Conclusions

- **Wind and temperature forecasts can have a significant affect on aircraft trajectory estimation**
- **Supporting various RTCA activities**
- **Key RTA analysis findings**
 - **9 DFLs better than 4, but not significantly for cases examined**
 - **Performance of GFS nearly as good as HRRR**
 - **Performance with 2-hr HRRR forecast data nearly as good as “truth”**
 - **Procedural speed constraints have major impact on RTA performance**
- **Next Steps**
 - **NAS-wide comparison of flights with and without speed constraints**
 - **Conduct RTA flights down to Initial Approach Fix**
 - **Analyze impacts of using aircraft-derived winds**
 - **Modify Mode-S EHS interrogator**
 - **Generate methods to provide confidence of wind forecasts**
