7

Disadvantages of Current Suite

⌘ Constructed with words and contractions

- ⊗ Difficult to ‘draw a picture’ with words.
- ⊗ Character limitation of ~3900 characters
 - ✂ Further reduces detail, compromises accurate description
- ⊗ AIRMETs are time smeared and defined with simple polygons.
 - ✂ Results in advisories where forecaster never intended.
 - ✂ Results in advisories when forecaster never intended.

Comparisons with AIRMET

October 22, 2002

Weather

Disadvantages of Current Suite

⌘ Different rules from Annex 3 description for SWL.

- ⊗ Text based. Graphics are simple pictorial representations of official text product.
- ⊗ Hinder use of forecast information systems across international boundaries.
- ⊗ Will hinder improvement of graphical forecast imaging.
- ⊗ U.S. style is alone in the world.

October 22, 2002

Friends & Partners of Aviation
Weather

12

Why Change?

⌘ Graphical Forecasts contain more information.

- ⊕ “A picture is worth a thousand words... a graphical FA is worth a thousand contractions pilots don’t understand.”
- ⊕ Features and their spatial variability are pictured, not articulated.
 - ✂ Can be selectable.
 - ✂ Can be zoomed
 - ✂ Can be detailed
- ⊕ Weather evolution better communicated through higher time resolution of graphical information.

⌘ Graphical Forecasts are *more accurate* over time and space.

Why Change?

⌘ The time is right.

- ⊕ Producers have capability to create graphical products (latest changes in NMAP production capability).
 - ✂ Alaska interested in NMAP
 - ✂ Canada interested in NMAP
- ⊕ Users have capability to view:
 - ✂ Honeywell WINN system
 - ✂ Experimental Aircraft Association Oshkosh
 - ✂ Aviation Digital Data Service
 - ✂ OASIS
 - ✂ COBOR, Morcom, etc.
- ⊕ Break Ground for new graphical products

October 22, 2002

Friends & Partners of Aviation
Weather

14

Change to *What?*

⌘ ICAO Annex 3 Prescription: BUFR

⊕ BUFR (Binary Universal Form for the Representation of Meteorological Data)

✂ *Object Oriented*

✂ Rules are *international*

✂ NOT a picture, but a coded, earth-oriented description of weather info that can be made into a graphic!

⊕ *International Description of Weather Information. A single system is needed.*

✂ Important in *weather in the cockpit* era.

✂ The prescription already exists in Annex 3.

Change to *What?*

⌘ AWC recommends international standards be followed as international communication and graphic display systems evolve:

- ⊕ AWC producing High Level Significant Weather Charts SWH in BUFR in next few months, matching the UK.
- ⊕ BUFR code for SIGMETs under development *now*.
- ⊕ WAFS SWM products and charts produced in BUFR.
- ⊕ SWL is next logical step for the US.

24

The latest forecast when you need it.

NEW BOSTON, MISSOURI

This Afternoon (10/4): Mostly cloudy skies, with a high around 69. Breezy, with a west northwest wind between 15 and 22 mph.

Tonight (10/4-10/5): A few clouds, with a low around 46. Northwest wind 18 to 21 mph decreasing to between 7 and 10 mph.

Saturday (10/5): Abundant sunshine, with a high around 66. Calm wind becoming south southwest around 6 mph.

Saturday Night (10/5-10/6): Mostly cloudy skies, with a low around 47. South southwest wind between 6 and 12 mph.

Sunday (10/6): Mostly sunny skies with a high near 65. South wind 12 to 18 mph becoming northwest.

Sunday Night (10/6-10/7): A few clouds, with a low near 45.

Monday (10/7): Sunny skies, with a high around 66.

Monday Night (10/7-10/8): A few clouds, with a low around 42.

Tuesday (10/8): Mostly sunny skies, with a high around 68.

Tuesday Night (10/8-10/9): Scattered clouds, with a low around 46.

Wednesday (10/9): Mostly sunny skies, with a high near 70.

Wednesday Night (10/9-10/10): A few clouds, with a low near 50.

Thursday (10/10): Mostly sunny skies, with a high around 67.

Need for Text

⌘ There are not enough resources at AWC to prepare both SWL graphics and area forecast text.

⌘ If text is necessary, produced through automated means.

⊕ Automating text, if necessary, will take 12 to 18 months to develop, depending on format of text.

Need for Text

⌘ Text Format Choices

⊗ Current Format

- ✂ Very Descriptive, segmented by states or portions of states. Six sections in the CONUS.
- ✂ Character limit continues to exist.

⊗ GAMET (General Aviation Meteorology)

- ✂ ICAO Annex 3, Section 6.6
- ✂ Very structured.
- ✂ Abbreviated, contractions, issued by FIR.
- ✂ Two parts: Hazards & Other Weather
- ✂ AIRMET definition changes.
 - ∪ An update to scheduled forecast

⊗ Modified GAMET as defined by Met Authority (FAA).

GAMET Example... section 1

Navigation Plan

Need for Text

✂ If graphical area forecast, who needs text?

- ⊕ Can AFSS briefers brief directly off graphics?
- ⊕ Can HIWAS be prepared directly from graphics?
- ⊕ Can DUATs print applicable graphics (as Corobor and Morcom do today?)
- ⊕ What text products are required by ICAO Annex 3?
- ⊕ Is text necessary to get us “over the hump”?

DIFFERENCES between SWL and US Area Forecast

US Area Forecast

- ⌘ By 6 Regions
- ⌘ AIRMET Definition:
Description of hazardous weather.
- ⌘ Official Forecast is the text with simple graphic description.

SWL & GAMET

- ⌘ By ARTCC FIR
- ⌘ Amendment of SWL/GAMET if hazardous weather not forecast.
- ⌘ Official Forecasts are the graphic and simple text description (if necessary).

Graphical Forecast Experiment GFAX

- ⌘ January 15-February 14
- ⌘ Determine if AWC can produce 3-hourly GFA charts for the CONUS.
- ⌘ Refine BUFR production/output requirements for NCEP Computer Development.
- ⌘ Refine GAMET production requirements for Meteorological Development Laboratory.
- ⌘ Collect BUFR forecasts to use for auto-text software development.

October 22, 2002

Friends & Partners of Aviation
Weather

34

GFAX Development Issues

- ⌘ Confident we can provide internet accessible charts similar to <http://aviationweather.gov/demo/>
- ⌘ Test if we can provide 3 hour updates.
- ⌘ Measure difficulty issuing text AIRMETs for updates. Develop requirements to produce efficiency tools.
- ⌘ Looking for user comments on utility of product from internet display.
- ⌘ Test GFA tool under development
 - ⊗ ASOS Observations in MSL
 - ⊗ MOS Ceilings in MSL
 - ⊗ Mountain Obscuration Tool
- ⌘ Retool creation of BUFR files to meet developing standards

GFAX Development Issues

⌘ Questionable:

- ⊗ Ability to create and distribute “user-ready” BUFR files.
- ⊗ Ability to create GAMET from VG Files and/or BUFR files.
 - ✂ What can Meteorological Development Laboratory do before mid-November? (Nothing, according to Bob Glahn, given current resources and priorities.)
 - ✂ Can HPC provide 3 hourly fronts? (No. Requirement for 3 hourly forecast fronts will be put on resource list.)

After the GFAX

⌘ Refining Text Requirements

⌘ User Feedback

⊕ Pilots, Dispatchers, FSS

⌘ Refine BUFR Requirements

⊕ WSI provides FSS workstation displays.

⊕ WSI already into BUFR.

∞ Hmmmmmmmm.....

⌘ ICAO Approval

October 22, 2002

Weather

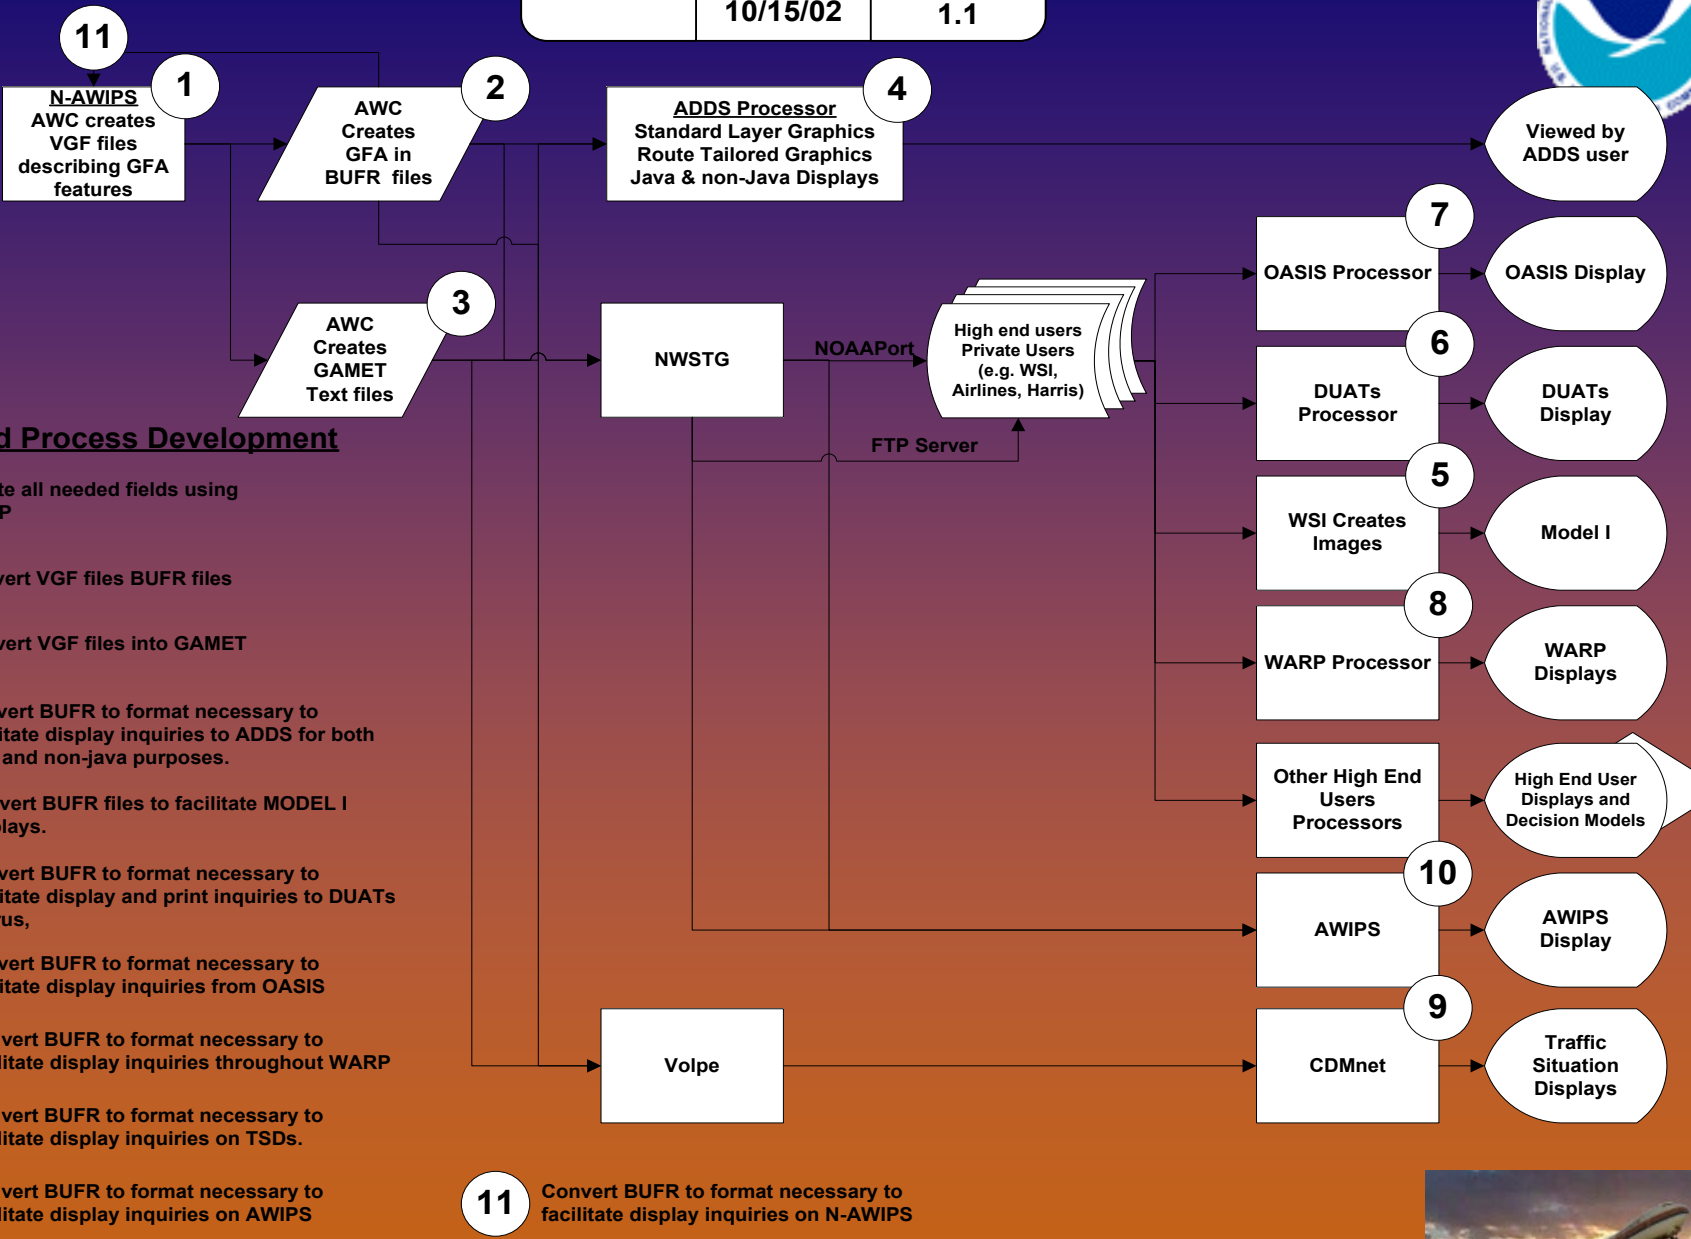

37

GFA Distribution Draft

10/15/02 1.1

Required Process Development

- 1 Create all needed fields using NMAP
- 2 Convert VGF files BUFR files
- 3 Convert VGF files into GAMET text
- 4 Convert BUFR to format necessary to facilitate display inquiries to ADDS for both java and non-java purposes.
- 5 Convert BUFR files to facilitate MODEL I displays.
- 6 Convert BUFR to format necessary to facilitate display and print inquiries to DUATs (Cirrus,
- 7 Convert BUFR to format necessary to facilitate display inquiries from OASIS
- 8 Convert BUFR to format necessary to facilitate display inquiries throughout WARP
- 9 Convert BUFR to format necessary to facilitate display inquiries on TSDs.
- 10 Convert BUFR to format necessary to facilitate display inquiries on AWIPS

- 11 Convert BUFR to format necessary to facilitate display inquiries on N-AWIPS
