

# Designing in Calibrated Trust in an AI-Enabled TFM Prototype

Patricia McDermott

Christine Taylor

October 31, 2024

**MITRE**

**SOLVING PROBLEMS  
FOR A SAFER WORLD™**

# Strategic TFM

In today's operation, TFM decisions are *experience driven*

The National Airspace System is a **complex, highly-connected, non-stationary system**

A **multi-stakeholder, multi-objective** problem

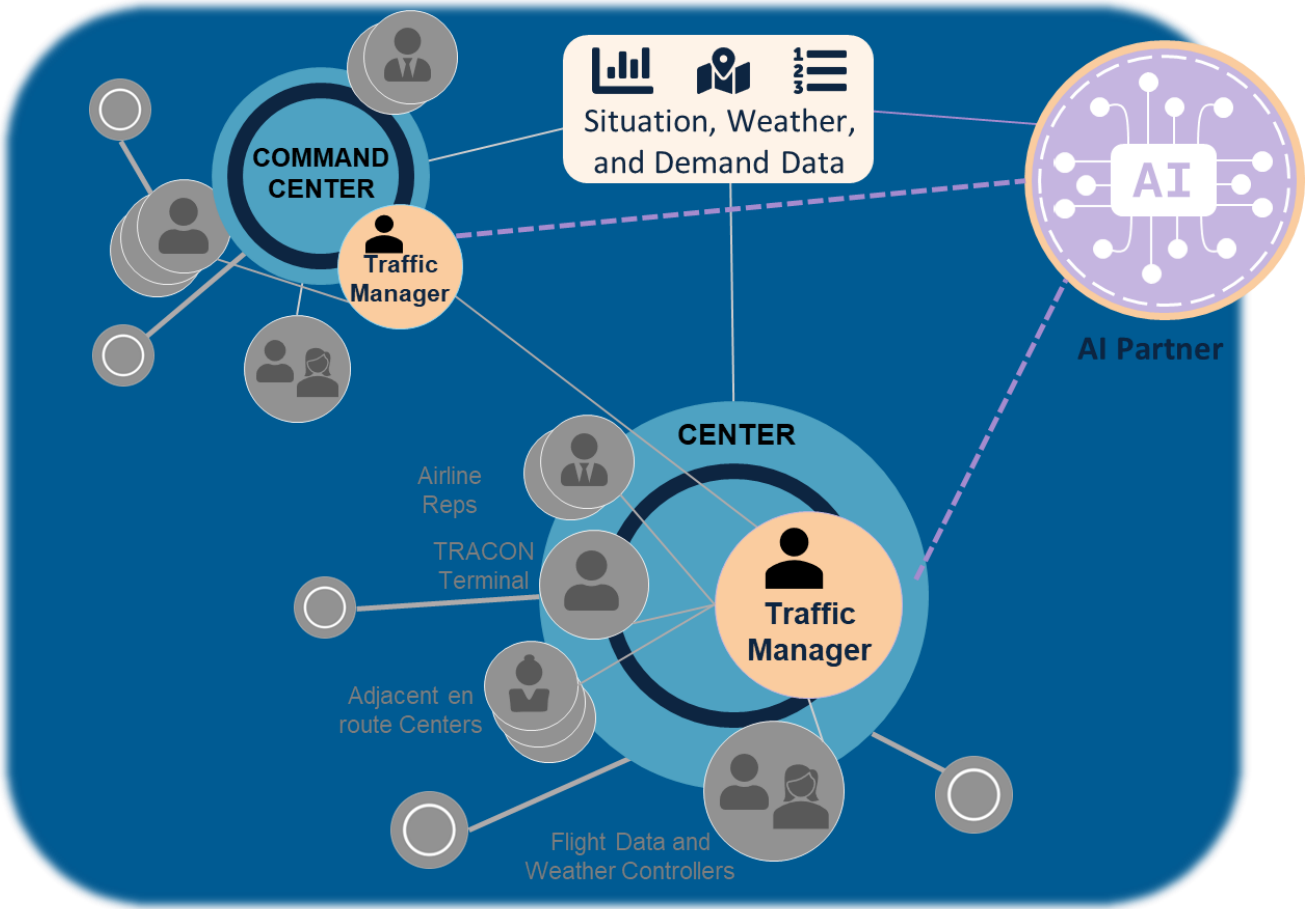

**Forecast uncertainty** drives the tradeoff between

*How can advanced automation assist in this space?*

# Vision for AI-Enabled TFM

Challenge: In today's operation, TFM planning decisions are experience-driven

### AI Recommendation

1 Recommendation	Performance Outcomes	
	Uncertainties	XX%
2 Recommendation	Performance Outcomes	
	Uncertainties	XX%
3 Recommendation	Performance Outcomes	
	Uncertainties	XX%

### AI Confidence

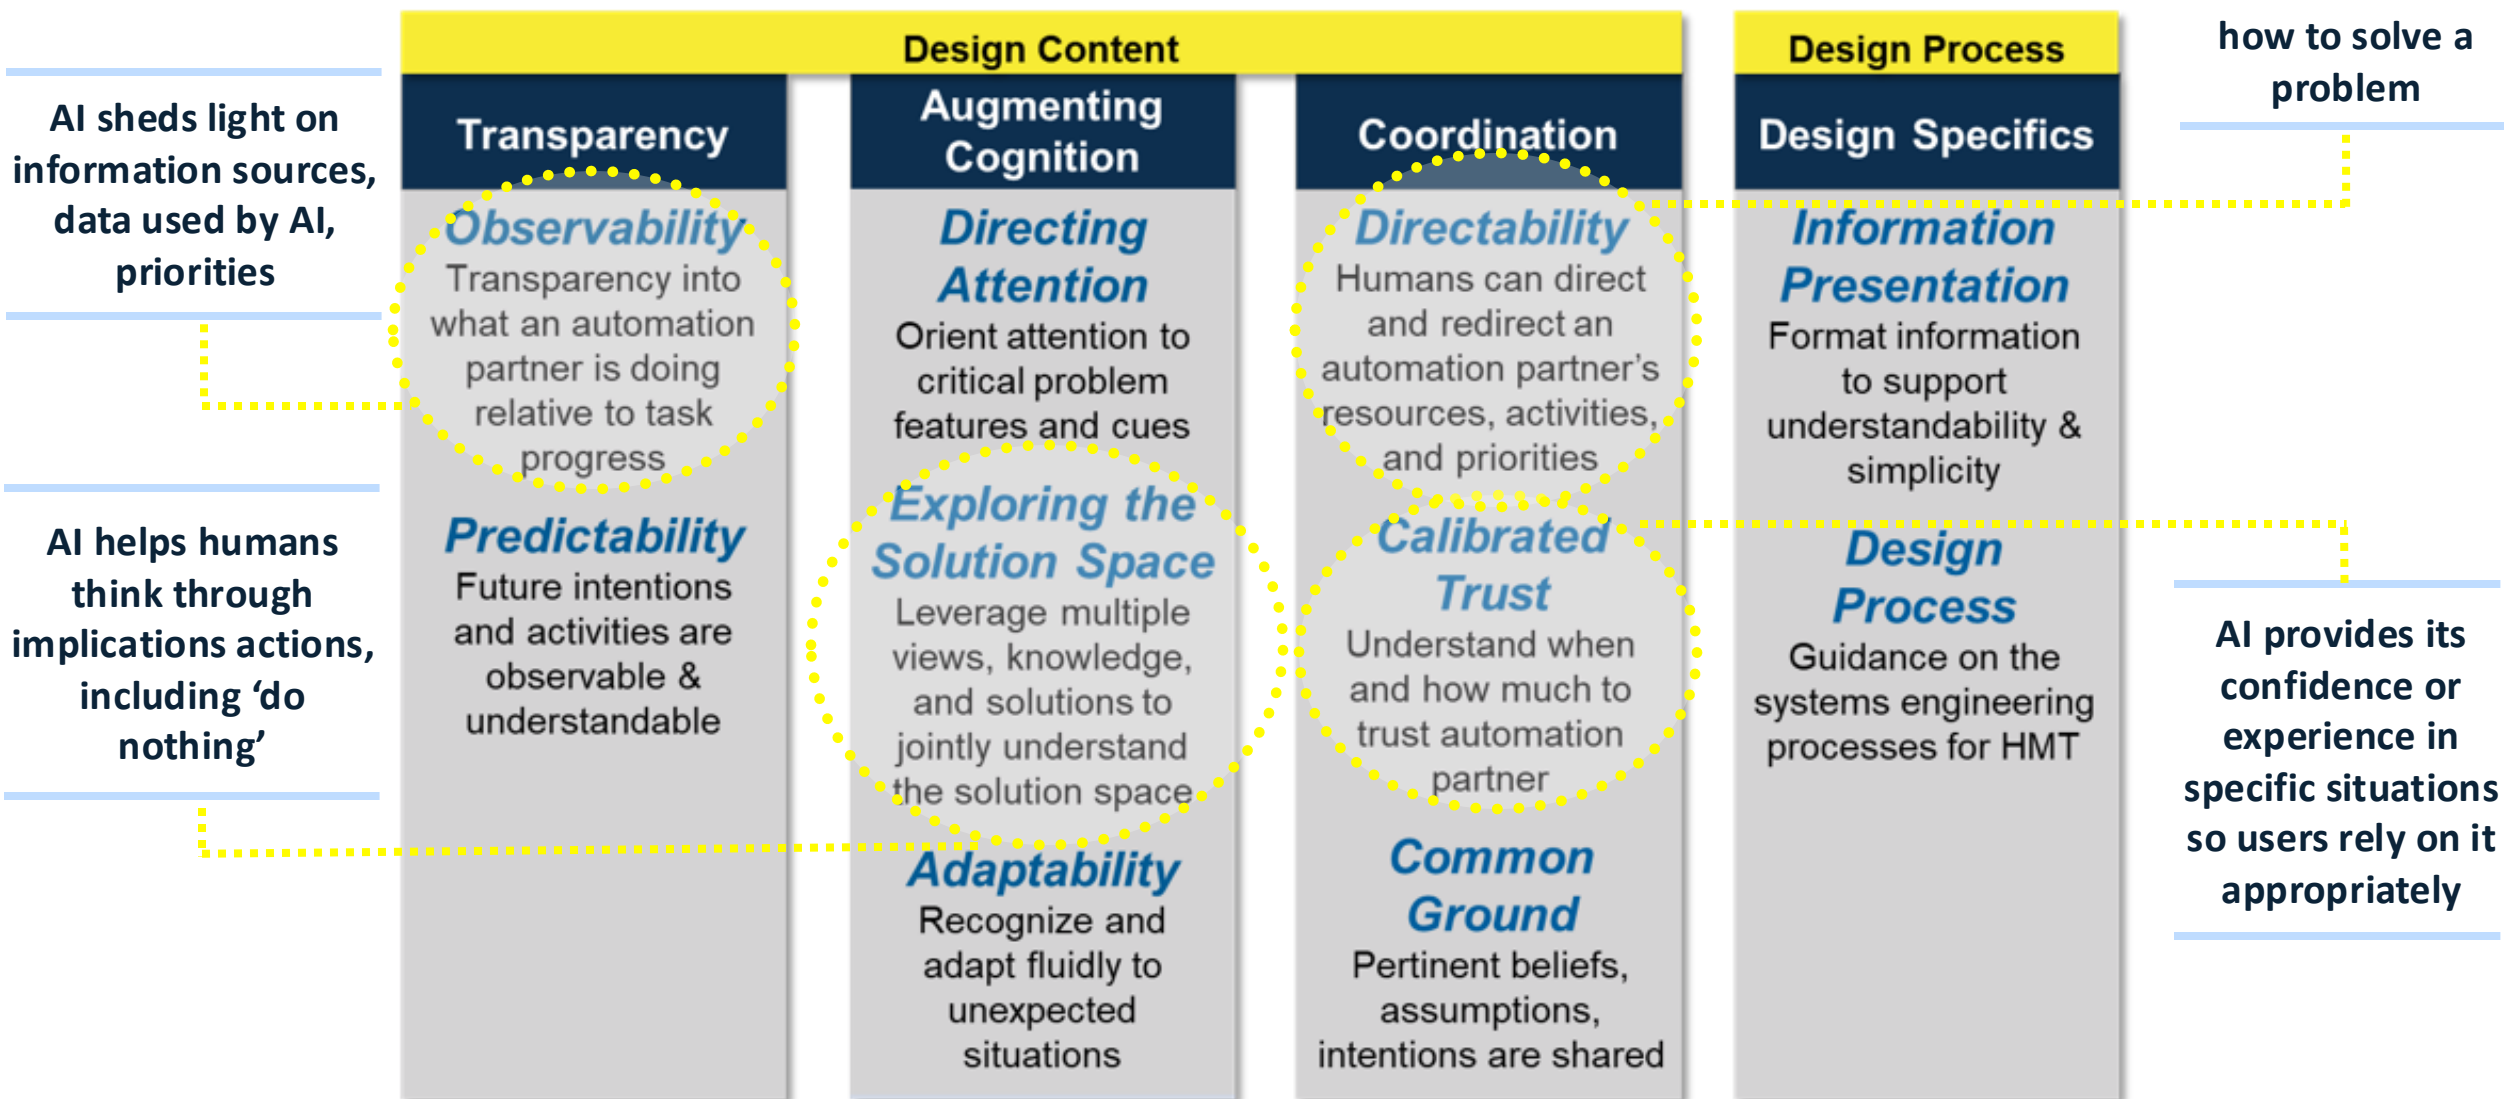

AI Recommended Plan					Medium Experience
TYPE	START TIME	END TIME	DURATION	RATE	
GDP	21:00	22:00	1h 0m	28	
GDP	22:00	23:00	1h 0m	24

# Key Aspects of Human-Machine Teaming in TFM

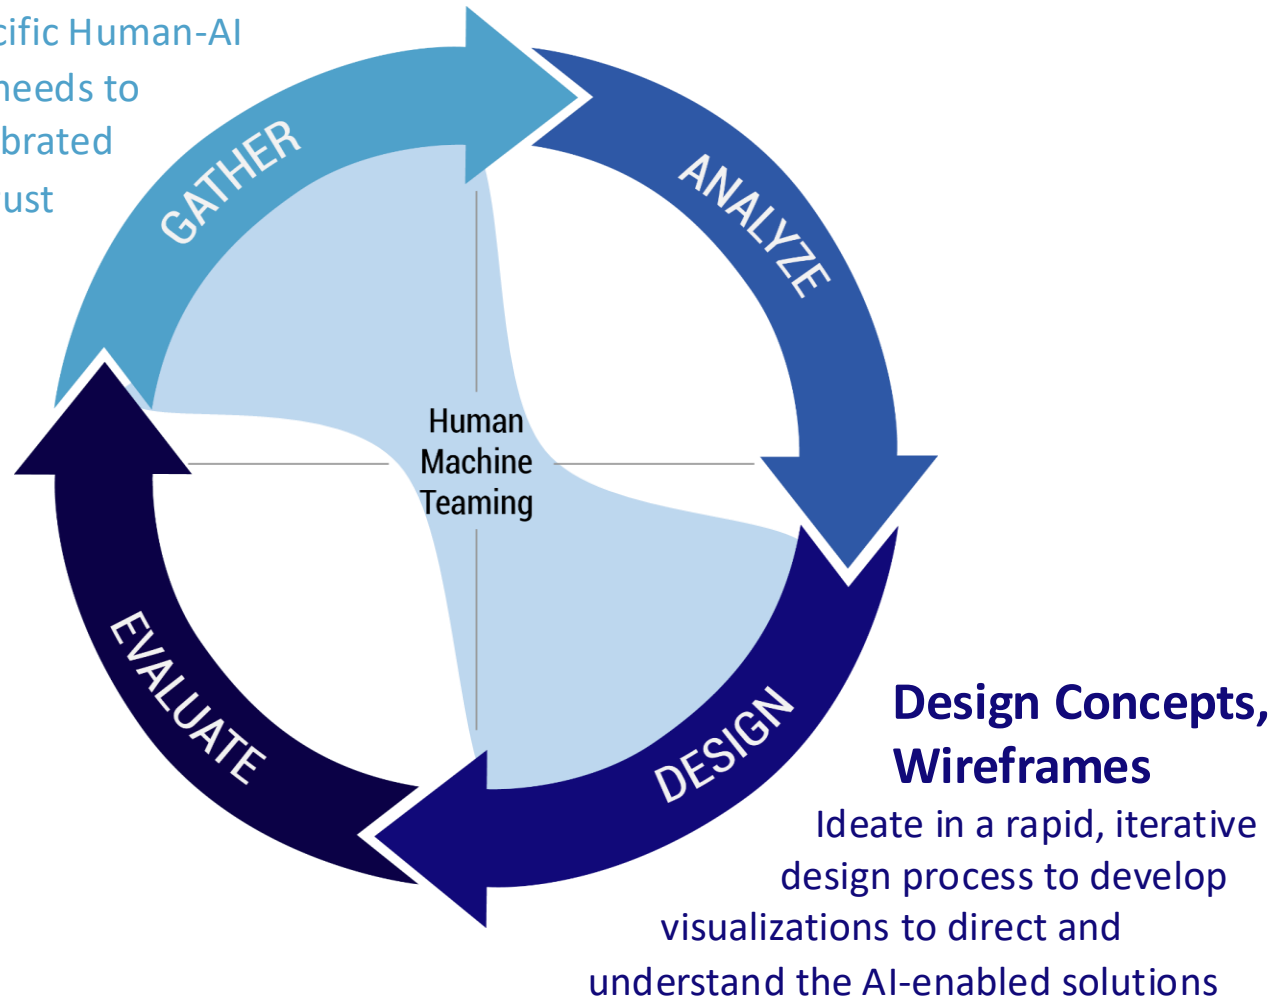

AI takes direction from humans on how to solve a problem

# Design and Evaluation Process

## User Engagement

Weekly interactions with SMEs to elicit specific Human-AI interaction needs to support Calibrated Trust

## Four Roundtables

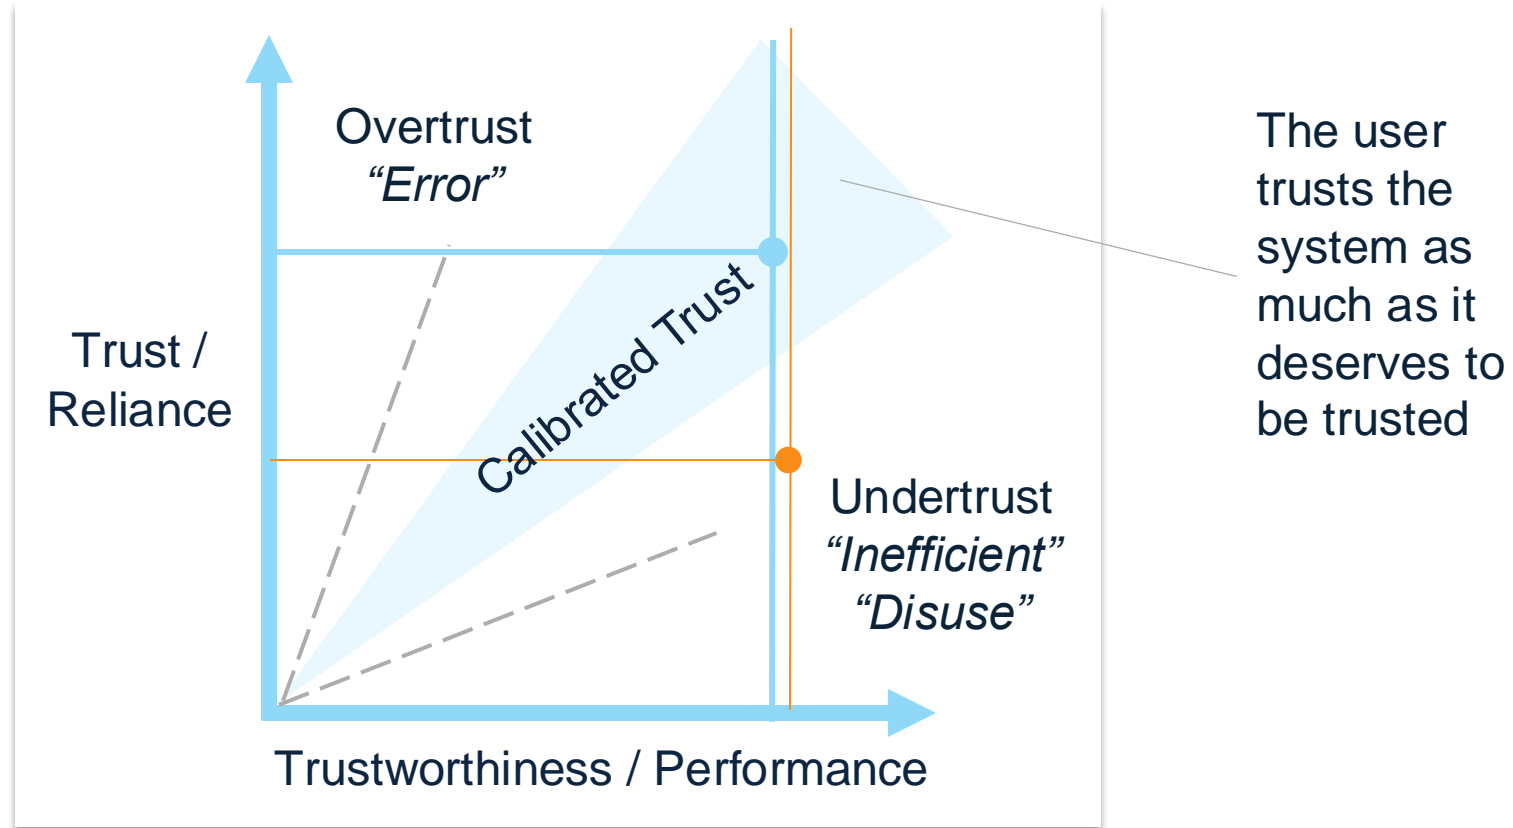

- Does [X] support the development of Calibrated Trust?
- Which human-AI interaction concepts are the most promising?
- What is the currency of collaboration in collaborative decision making?
- What are the human expectations on the AI in this context?

## Human-in-the-Loop (HITL) Experiment

- Does AI add value to the human decision maker?
- Sample Metrics
  - User Adoption, Compliance
  - Confidence in Decision
  - Machine Learning Trust Score
  - Explainability Satisfaction
  - Predicted Plan Performance

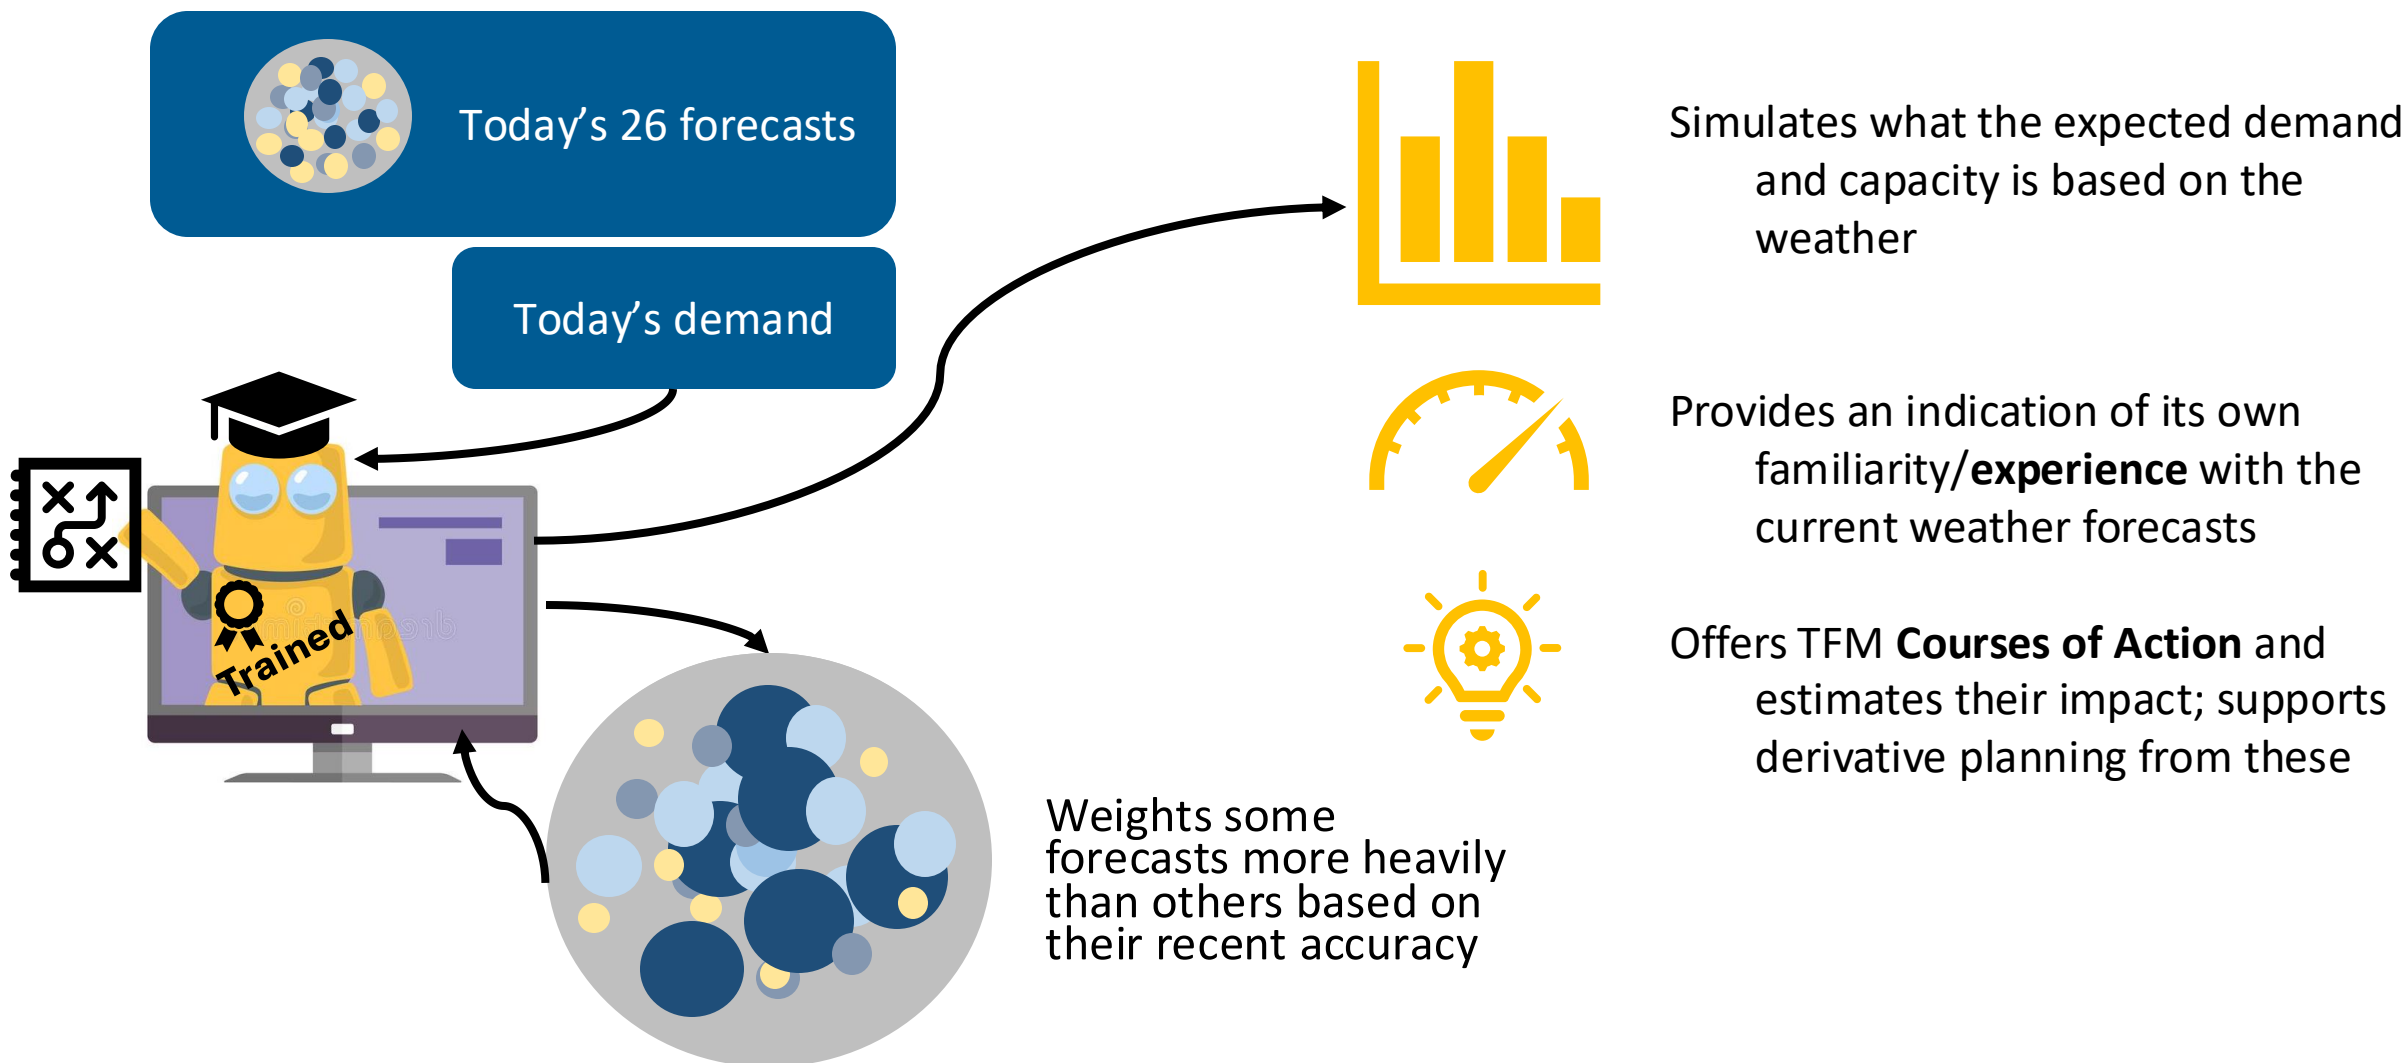

# Calibrated Trust

**Appropriate Reliance: Users understand the strengths and weaknesses of the Automation/Autonomy/AI, so they will rely on it appropriately and use it more effectively**

# Prototyping a Solution

# AI Experience

historical forecasts & demand

AI in Training

today's forecast & demand

Deployed AI

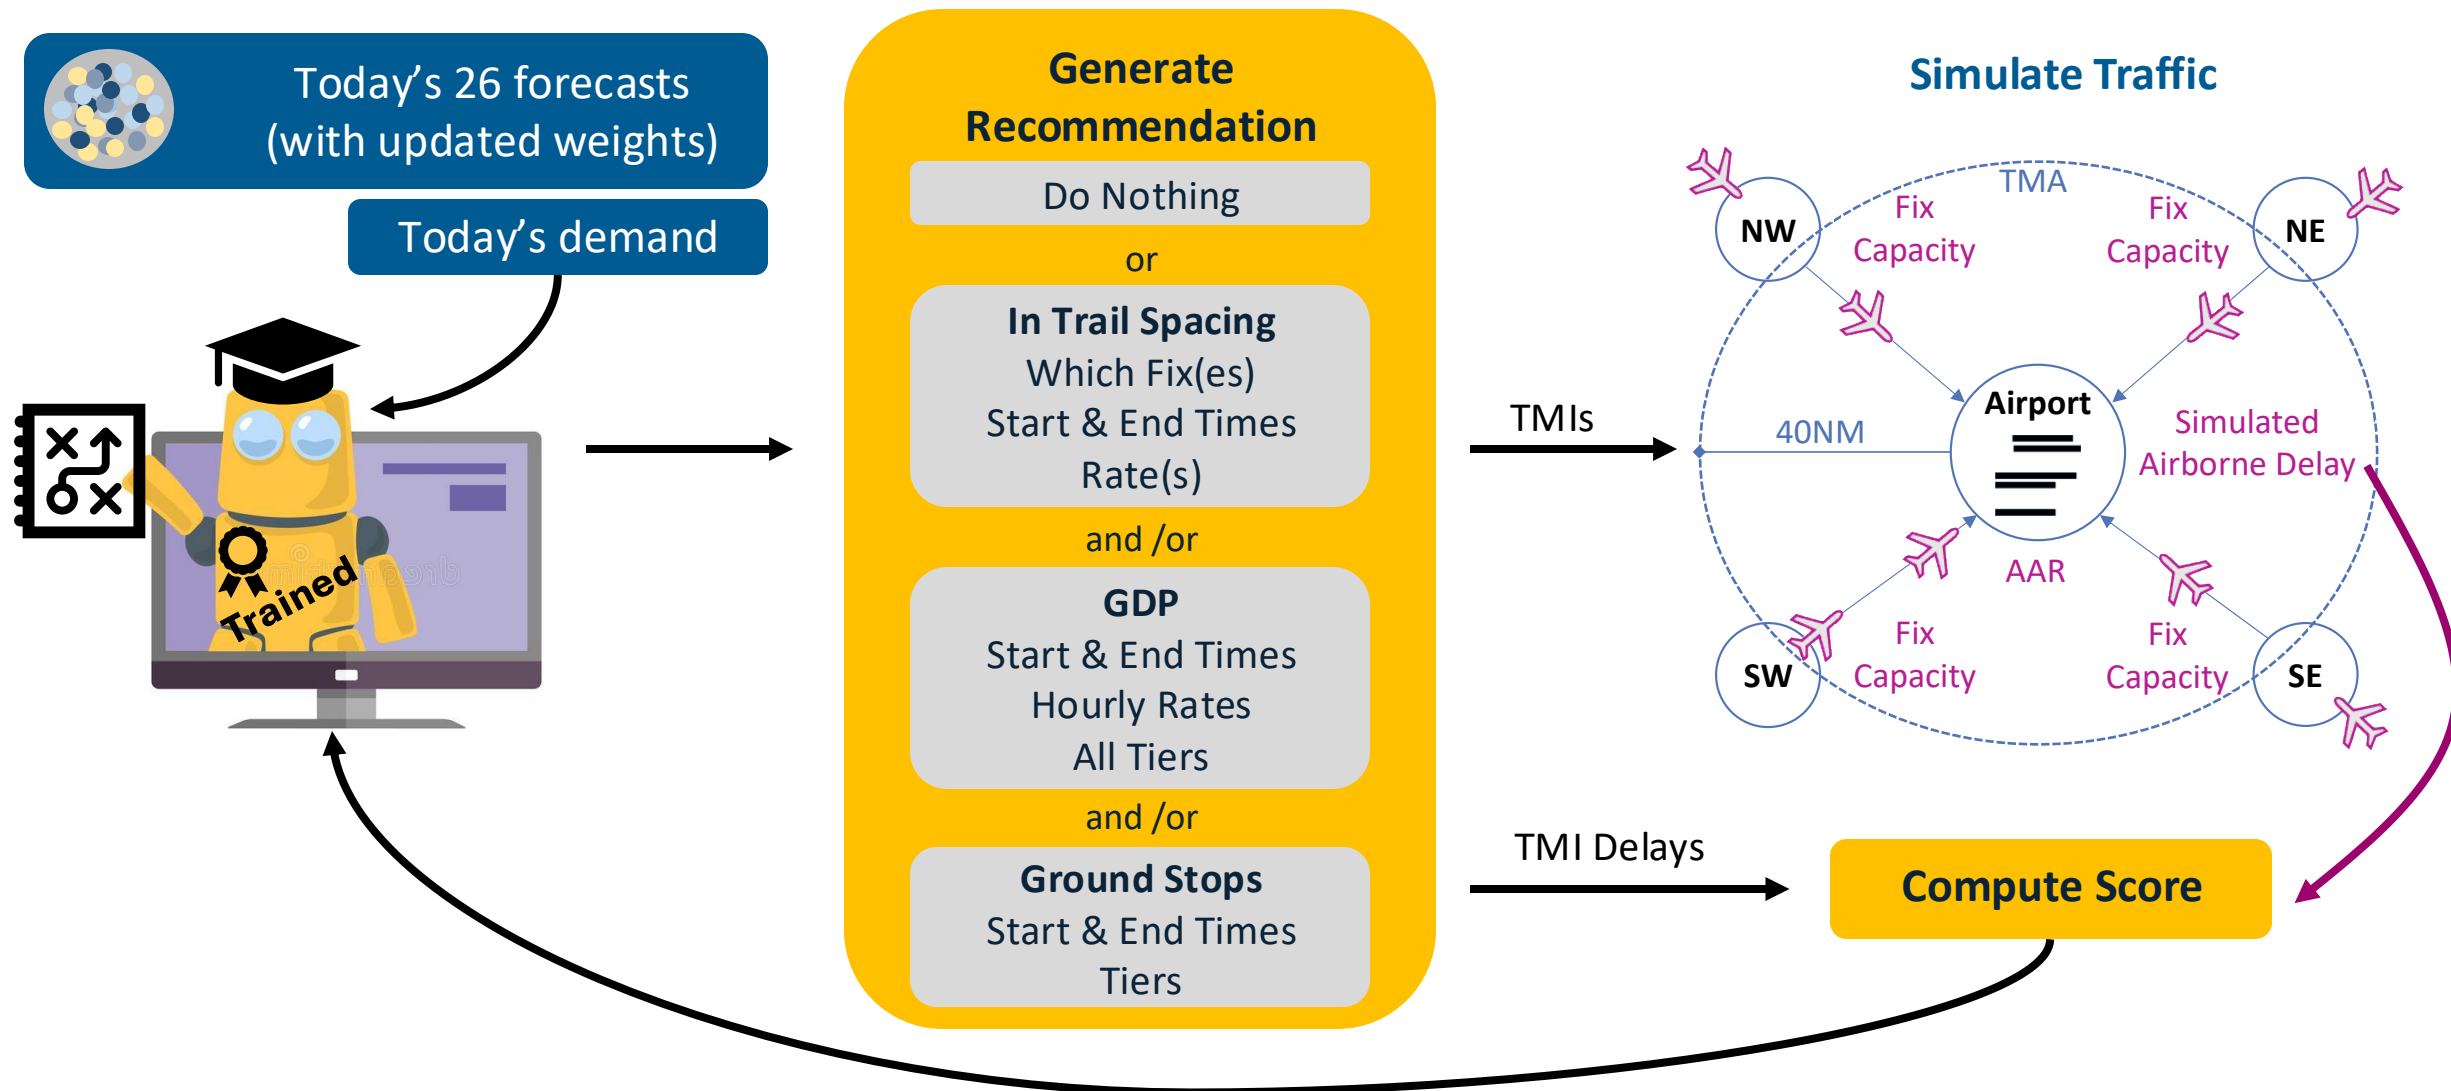

AI experience is **high** because it has trained on many *similar* historical days

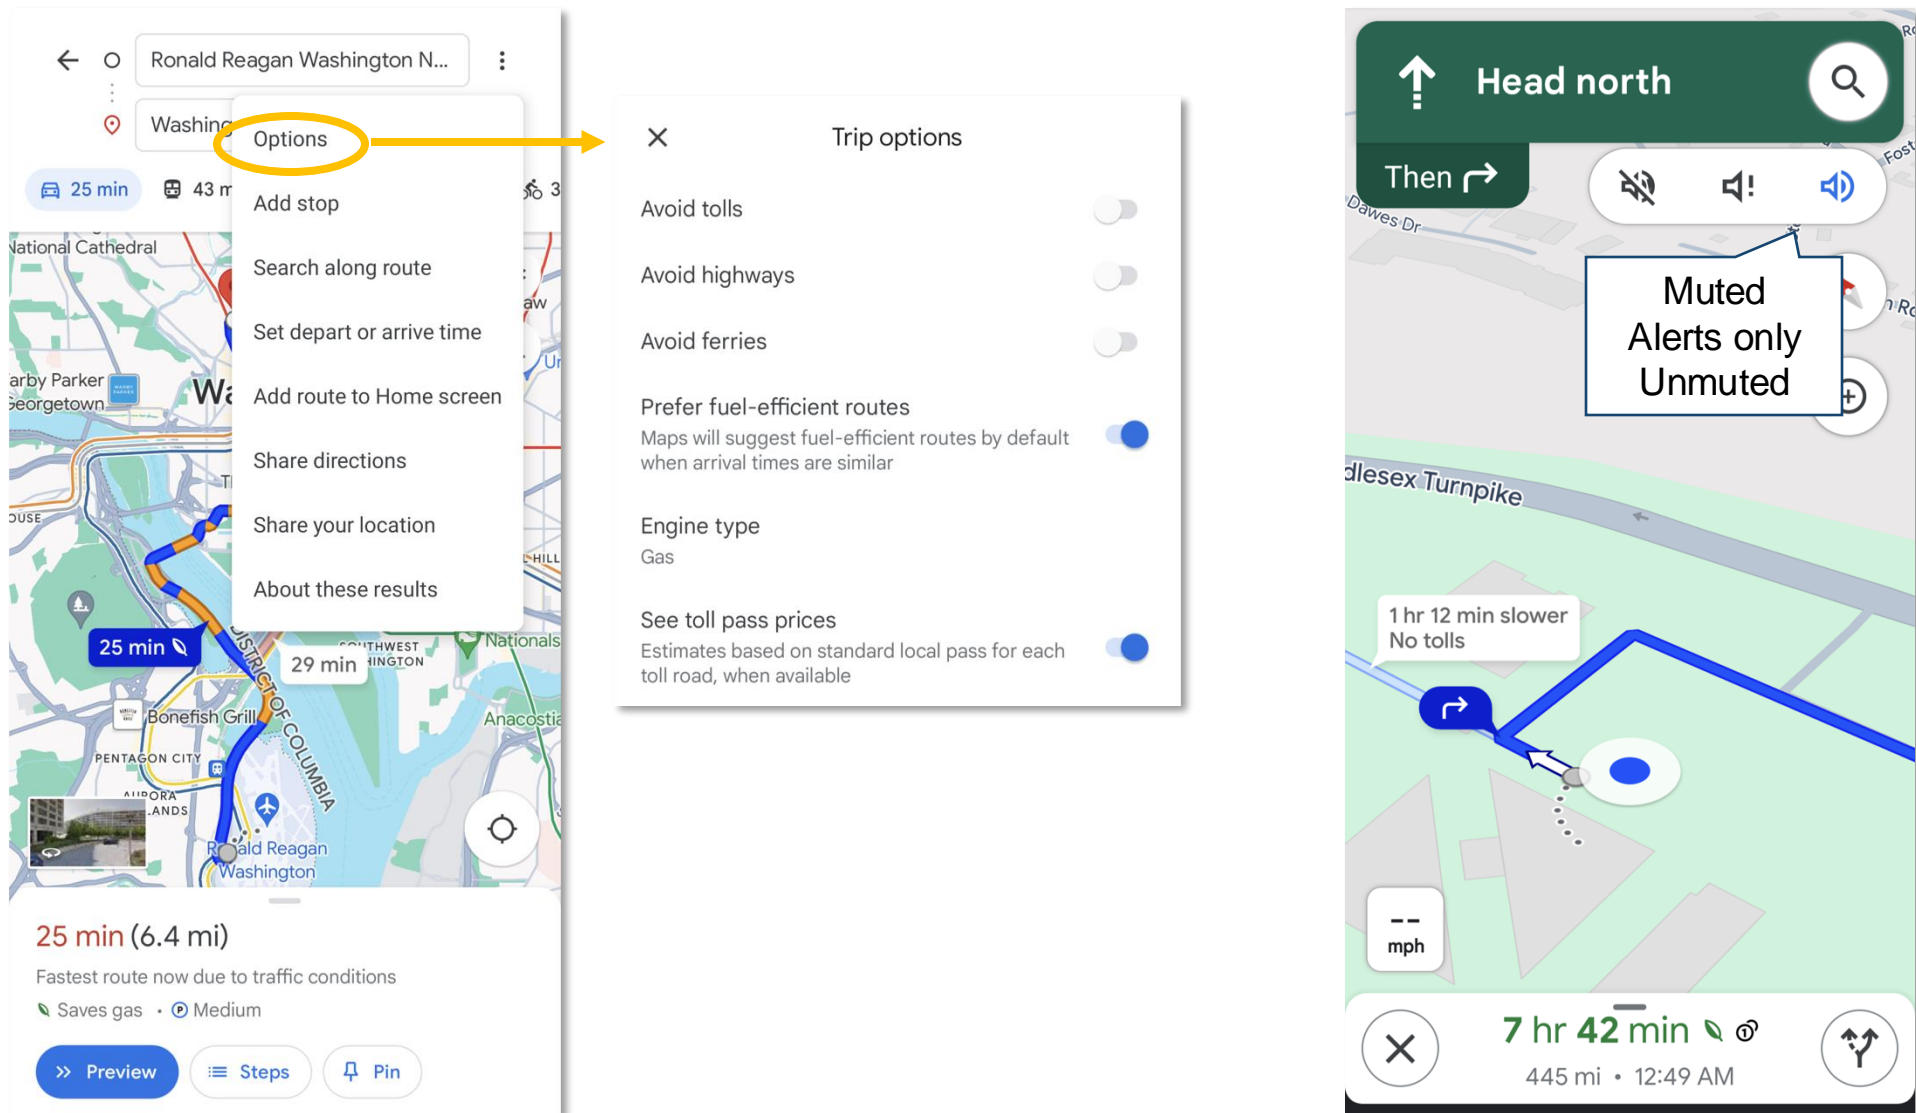

Solution more likely to be optimal given the AI's high experience

# Case Study: Managing Arrivals into Atlanta (ATL)

# Driving Example: Directability and Observability

# Situation Overview

## Demand and Capacity

Collapse

### Capacity

☒ Weighted Average

☐ Mode

☒ Forecasted

### Demand

☒ Scheduled

☒ AI Recommended Adjusted

### Custom Demand

☒ My Custom Plan

Forecast uncertainty is clearly displayed to inform both likelihood of constraints and range of outcomes

AI-generated recommendations consider the range and likelihood of future constraints

Users can trial plan alternate TMLs, comparing performance

My Custom Plan	GDP 13:15Z-14:15Z @ 24 GDP 14:15Z-15:30Z @ 26	0.00	7.48	N/A	0.71	1.78

AI Experience Index: **MEDIUM**

Similar day classification model provides transparency into AI's familiarity with problems "like today"

Average Residual Delay estimates remaining demand/capacity imbalance from corresponding TMI plan

Average In-Trail TMI Spacing Delay

Airport Utilization

Average Residual Delay

Time histories provide additional detail and align with selected demand view

# Key Takeaways

Successfully created working AI that incorporates (offline) historical learning to inform (near) real-time generation of recommendations to new problems

Roundtables showed that Traffic Managers trust was appropriately calibrated to the AI experience

Quantified AI's experience on "days like today" based on domain-informed features

Generated operationally-informed quantitative metrics to assess the goodness of TFM plans developed under uncertainty

Prototype effectively communicates forecast uncertainty, potential impacts, and the expected performance of proposed TFM plans

# Training the AI

1000s of historical  
weather forecasts

Historical demand

AI in Training

Over time, AI produces a  
rulebook about which TFM  
solutions work best in  
different scenarios.

Today's forecast

Today's demand

Deployed AI

Using the rulebook at a  
starting point, tries millions  
of solutions and chooses the  
best one
